

Roster Scheduling and Personnel Management System For Police, Fire and EMS

Plan for the future with Roster Scheduler!

The management of available resources is the most complicated procedure within any public safety agency. Who's on, off, available, re-assigned, on vacation, sick for any given day of the year. The solution is to eliminate the guesswork associated with scheduling of personnel and resources.

Track overtime, who's on, off, available and eliminate the guesswork – all from your browser

The **Personnel Mgt.** system was designed to schedule any number of divisions, each with their own specific rotations/shifts. Flexible definitions of work group rotations are defined by each agency including 4 on/2 off, 24 hour shifts, overlapping shifts etc. Customized work codes and accrual categories for exceptions to schedules (vacations, sick, swaps, personal days) define one of the many attributes of the system.

Will we have enough personnel on for the holiday next month? = advance scheduling

Designed to be accessed from mobile units or in-house systems, communicating assignments and work schedules becomes a stream-lined and coordinated effort.

Powerful searching tools help you find what you're looking for from wherever you are.

Based on security levels assigned by each agency, personnel can view their own schedules and assignments. Use the Roster Scheduler to see at a glance, any changes in assignments, manpower allocation or use the **QuickFind** feature to pull up a particular day's roster.

Minimize the learning curve!

Integrated instructions for each field and function combined with Internet Explorer as the user interface creates an environment familiar to the users and reduces training time to a minimum.

Manpower projections to help make administrative decisions related to overtime.

Advance call scheduling module

By assigning resources in advance with Q.E.D.'s unique advance scheduling module you'll know you've covered all the bases.

Turn data into information

Q.E.D.'s integrated Quick Search module allows for the creation of customized reports on accruals, manpower by person, station, month, division, shift etc. Drill down capability allows supervisors to move from a broad view (such as overtime summaries) to a specific view (such as overtime by shift).

Important Attributes of Personnel Manager

Supports Many Configurations

Q.E.D.'s CAD and RMS is not required to utilize Roster Scheduler however rosters can be pre-loaded into Q.E.D.'s CAD 4.0 dispatching system.

Users access Roster Scheduler and WEB/Partner through Microsoft Internet Explorer™ browser.

Flexible Access Security

Roster and Scheduling pages can be accessed within your Department, or by selected outside personnel at your discretion. If your network has a Virtual Private Network gateway, you can provide secure access to mobile users via CDPD, or to personnel working from their homes or other remote locations.

System Requirements

Personnel Manager works in conjunction with Q.E.D.'s WEB/Partner environment

- A Local Area Network (LAN) with a Windows-NT Server™ running Microsoft Internet Information Server (IIS) is required to provide Web services. Q.E.D. supplies this server with the WEB/Partner product.
- Personnel Manager and WEB/Partner can be purchased with a pre-configured Windows NT Server for easiest and quickest setup.

With Personnel Manager's simple, centralized architecture, you get up and running quickly.
