

### Extending Communications beyond dispatch

#### Mobile Dispatch provides intelligence to mobile units!

Dispatch Anywhere represents Q.E.D.'s efforts to extend communications beyond the dispatch center and into the field, providing officers in the field with the same information available to communications personnel.

Too often, personnel in the field rely on in-house personnel to convey information related to a particular event, suspect, or the status of other units. This approach leads to critical delays related to information transfer.

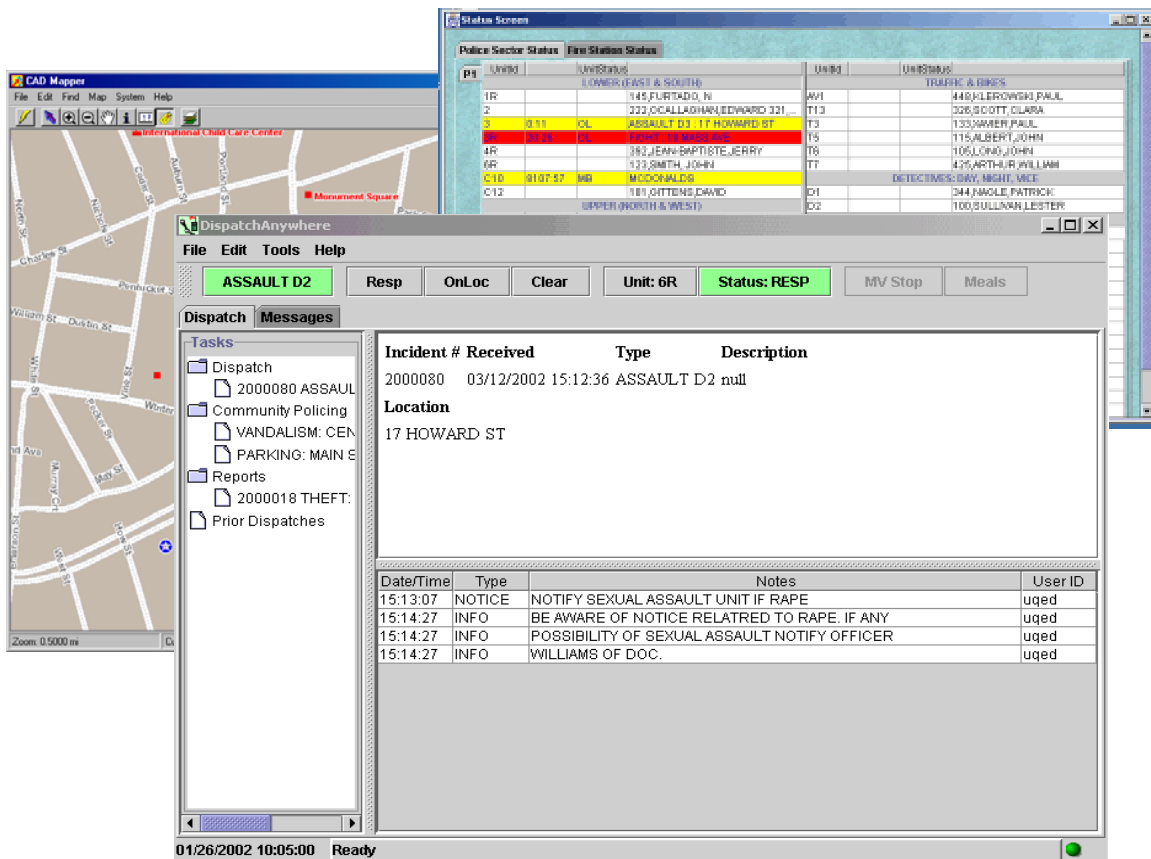

#### Extending communications to the field is a priority!

Through the utilization of today's technologies, mobile units can now be directly linked to the in-house system in real-time independent of the mobile provider.

#### Mobile Dispatch

Mobile units can now self-initiate their own call for service (MV STOP), update their status (on location etc.), receive real-time information related to a call for service such as notifications at the address, review booking histories and even look up color photos of suspects.

*The call to dispatch is only a prelude of what is to come. Be prepared!*

## Scenario

Imagine for a moment that you are dispatched to an incident involving domestic violence.

Ask yourself these questions:

How you will know all the information associated with the call for service?

Is a restraining order in effect?

Is a photo of the suspect available?

Has a gun permit been issued at the address?

What other units are in the area?

Any special hazards or notices for the address?

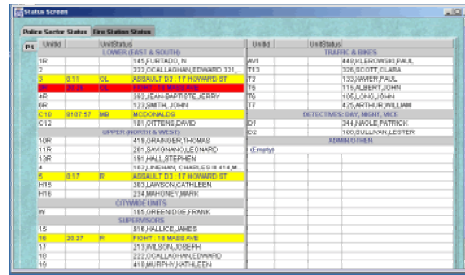

Dispatch Anywhere is the answer! All of the above information is available in real time and easy to access through simple to use links.

The majority of the answers are presented automatically upon dispatch to both the units and the dispatcher. In addition, the information available to the unit is configurable by the department.

## Mobile Command and Control

As a field supervisor, in today's public safety environment, the location and status of units is critical in making decisions while in the field. Rather than rely on communications to convey this information, view the real time display from your mobile computer. Remote command and control is now a reality!

## Real-time integration to mobile units with dispatch and status updates!

Unit	Status	Unit	Status
104	ON STATION	105	ON STATION
106	ON STATION	107	ON STATION
108	ON STATION	109	ON STATION

194	ON STATION	195	ON STATION
196	ON STATION	197	ON STATION
198	ON STATION	199	ON STATION
200	ON STATION	201	ON STATION

Q.E.D. also supports the integration of mapping to the mobile units. Call for service can automatically be 'pinned' in the responding units for quick lookup on the map display.

*Information is knowledge – Dispatch Anywhere provides information!*

*In-house or on the road, Dispatch Anywhere is there!*
